

SEE WHICH SOYBEAN VARIETIES HELP PROTECT LIVESTOCK FEED MARKETS

SOYBEAN VARIETY RANKINGS - ILLINOIS

HY+Q means High Yield PLUS Quality, a checkoff-funded program to support everyone's commitment to more yield, quality and value. We believe farmers banking more harvest value tomorrow requires clearly seeing where soybean value hides today. Shining a new light on soybean quality puts more control in the hands of farmers to increase future soybean value.

Growers can now consider livestock feed value when selecting soybean varieties, just as they might consider disease resistance or drought tolerance. By selecting seed varieties with the highest nutritional value, you help protect soybean's largest market – livestock feed – from the threat of synthetic amino acids and other grains.

The following pages summarize the results of analysis of 349 soybean seed varieties based on 46,683 soybean samples based on livestock feed value. Each variety must have been planted in the 2018 or 2019 F.I.R.S.T. trials to be included on this list and have been planted in at least one test plot in Illinois.

You can also submit your own samples in Fall 2020 to receive a personal feed value report by visiting soyvalue.com.

RESULTS SUMMARY BY SEED BRAND

Varieties are ranked based on their livestock feed value score on a scale of 1 (lowest) to 10 (highest). A score of 5 represents the minimum threshold for livestock feed value.

AGRIGOLD					
Brand	Variety	Variety MG	Number of Observations	Average Weighted Meal Value (\$/ton)	Average Relative Value Score
AGRIGOLD	G 4750 RX	4	6	\$381.61	5.7

RESULTS SUMMARY BY FEED VALUE SCORE

Varieties are ranked based on their livestock feed value score on a scale of 1 (lowest) to 10 (highest).
A score of 5 represents the minimum threshold for livestock feed value.
